Elmet Achieves AS9100 Certification

LEWISTON, Maine, March, 2012 — Elmet Technologies is proud to announce the achievement of AS9100 Certification for the our manufacturing facility in Lewiston, Maine.

As the internationally recognized Quality Management System standard specific to the aerospace industry, AS9100 is strongly supported and adhered to by aerospace OEMs and suppliers.

Elmet's achievement of AS9100 certification reflects the company's commitment to meeting the increasingly stringent industry requirements for aerospace products. This certification also ensures our process-oriented approach will meet the rigorous quality requirements of all the industries Elmet serves. AS9100 is based on the ISO 9001:2008 quality management standard, and provides additional requirements and amplifications required by the aerospace industry.

Headquartered in Lewiston, Maine, Elmet Technologies is a global supplier of high performance materials with a specialization in Molybdenum and Tungsten. Elmet's product lines include wire, rod, sheet, and plate, in addition to machined and fabricated assemblies that are used in a variety of industries, including medical, alternative energy, semiconductor, and electronics. Elmet Technologies incorporates personalized sales and service into the manufacture of high quality products to maintain the position as a market leader.
